

Objective Controls

The Risk Management App

Product Overview

Objective Controls is a cloud risk management system that breaks the mold in a business area dominated by enterprise complexity and prices. It's pure cloud SaaS, runs on desktop and mobile computing devices, has a cool, modern and user-friendly graphical interface and it can be implemented in just a couple of hours.

Combined with a price tag of less than \$100 a month, Objective Controls is the first and currently the only app that can bring risk management to the masses.

Risk Management for SME's

The demand to manage risk effectively is coming from all directions. Once, only large, regulated and financial service companies were expected to manage risks. Today all that has changed; small to medium enterprises - SME's - including companies with no more than a dozen employees, are under pressure from investors, directors and banks to actively manage their strategic objectives, risks and internal controls.

Enterprise customers are more and more frequently demanding of their suppliers to see a comprehensive business continuity plan, including serious risk management activity.

Existing software solutions are expensive and require a lot of time and resources to implement them. An excess of money, time and resources are exactly what SME's don't have and Objective Controls has been developed for them to manage risk easily, cheaply and effectively.

30-Day Free Trial

Objective Controls is the new kid on the block in the risk management neighborhood. There's nothing to lose because we offer a free 30-day sign up and we don't even want your credit card details. In just 2 hours you can be managing your first risks and have a graphic prioritized risk report, all ready for your next board meeting.

Users

Objective Controls is the first risk management software solution ever that is simple and structured enough to be used by directors, investors and senior management such as COOs, CEOs and CFOs.

But it doesn't stop at C-level managers because its powerful risk management framework can get many more employees in the organization taking an active role in the process by monitoring controls, thus treating risks and proactively working towards achieving strategic objectives.

Read the risk management professional groups on LinkedIn and elsewhere and you'll see that objectives are the objective!
